

Compilation Details

Layer Name: Mineral Inventory

Layer Type: Minerals Geology

Feature Type: Point

General Information

Release Date: 2023-12-01

Released By: Yukon Geological Survey

Contact Info: geology@yukon.ca

Summary

A comprehensive and up-to-date dataset of Mineral Resource Statements, including NI 43-101, JORC, and historic deposits in the Yukon. Resource statements have been grouped and calculations have been made to average and total the tonnage and grade for a property.

Description

Last Updated: Dec 1, 2023

The purpose of this dataset is to provide quantitative analysis on specific commodities, offering insights into:

- The total amount of specific commodities, e.g., Gold, in Yukon's hard rock deposits.
- The highest-grade and largest deposits in Yukon.
- The distribution of mineral resources within multiple zones in a deposit.
- Source reports, direct links, and confidence levels for each mineral resource statement.
- Differentiation between 43-101, JORC, and historical estimates.

The resources in this dataset have been summarized and averaged to show the total geologic resource for a property or zone. For the exact numbers, please refer to the NI 43-101 compliant resource statement.
