

Occurrence Details

Occurrence Number: 095C 068

Occurrence Name: Beav

Occurrence Type: Hard-rock

Status: Prospect

Date printed: 8/6/2025 1:46:39 AM

General Information

Secondary Commodities: lead, zinc

Deposit Type(s): Sediment hosted Sedimentary Exhalative Zn-Pb-Ag (Sedex)

Location(s): 60°29'6" N - -125°49'4" W

NTS Mapsheet(s): 95C05

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as 180 Beav cl (YA6898) in Aug-Nov/82 by Utah ML, which performed limited mapping, EM and geochemical surveys later in the 1982, extensive geochem and geophysical surveys and mapping in 1983, and 4 holes (954 m) plus more mapping in 1984.

Capsule Geology

Sphalerite and galena occur in Ord-Dev Road River shale on the northwest side of the Beaver fault. The best grades on surface were less than 1% combined Zn-Pb over sizeable intervals. Drilling tested coincident geochem and geophysical anomalies in siliceous dolomite and intersected a sequence of limestone, dolomite and mineralized porcellanite (dolomite with interlayered silty carbonate). The mineralization occurs in calcite microveinlets and disseminated in black mudstone.

Work History

Date	Work Type	Comment
12/31/1983	Geology	
12/31/1983	Geochemistry	Also rock chip sampling.
12/31/1983	Ground Geophysics	Pulse EM.
12/31/1982	Geology	
12/31/1982	Geochemistry	Also rock sampling.
12/31/1982	Ground Geophysics	
12/13/1984	Drilling	Four holes, 954 m.
