

## Occurrence Details

**Occurrence Number:** 095C 070

**Occurrence Name:** Thor

**Occurrence Type:** Hard-rock

**Status:** Anomaly

**Date printed:** 12/16/2025 5:57:16 PM

## General Information

**Deposit Type(s):** Skarn Pb-Zn

**Location(s):** 60°23'33" N - -125°54'56" W

**NTS Mapsheet(s):** 95C05

**Location Comments:** 1 Kilometres

**Hand Samples Available:** No

**Last Reviewed:**

### Capsule

#### Work History

Staked as Thor cl (YA55533) in Jul/80 by a joint venture between Welcome North ML, Malabar Silver ML and E & B EL, which explored with geochem sampling later in the year. A joint venture between SEREM L and Samim Can Inc collected heavy mineral samples from this drainage in 1982. The Kor 1-72 cl (YB35311) were staked on this and the adjacent map sheet (NTS 095D 8) in Jun/93 by A.G. Harmon, northwest of the previous claim group.

#### Capsule Geology

Several Late Cretaceous to Tertiary syenite plugs intrude Ordovician to Devonian shale, limestone and siltstone, and Middle Devonian limestone, dolomite and grey shale. Minor lead-zinc mineralization occurs in a limestone unit on the west side of the intrusions. Sieved silt samples from this drainage returned values up to 1500 ppm Pb, 1000 ppm Zn and 4.1 ppm Ag.

### Work History

Date	Work Type	Comment
12/31/1982	Geochemistry
