

Occurrence Details

Occurrence Number: 095D 019

Occurrence Name: Seraphim

Occurrence Type: Hard-rock

Status: Anomaly

Date printed: 12/15/2025 1:09:17 PM

General Information

Secondary Commodities: zinc

Deposit Type(s): Unknown

Location(s): 60°34'36" N - -126°49'19" W

NTS Mapsheet(s): 95D10

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as D.K. cl 1-16 (YA67003), cl 17-24 (YA67162) and cl 25-48 (YA67309) in August and Sep/81 by the Karst Syndicate (K.J. Springer, Dome Mines Ltd and others), which performed mapping and geochem sampling in 1981 and 1982.

Capsule Geology

The claims are underlain by Middle Ordovician impure limestone and dolomite of the Sunblood Formation and Silurian to Lower Devonian shale of the Road River Group. A high zinc background was obtained over the shale, but copper and lead response was low.
