

Occurrence Details

Occurrence Number: 105B 103

Occurrence Name: Thrall

Occurrence Type: Hard-rock

Status: Showing

Date printed: 5/31/2025 8:02:56 AM

General Information

Secondary Commodities: copper, molybdenum, silver

Deposit Type(s): Porphyry Cu-Mo-Au

Location(s): 60°32'23" N - -131°20'12" W

NTS Mapsheet(s): 105B11

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Thrall cl (YA65947) in Jul/81 by Getty Can Mls L, which performed mapping and geochem sampling in 1981 and 1982 and a mag survey in 1982. The claims were transferred to Getty Res L in Aug/86.

Capsule Geology

The claims were staked on a GSC Mo-W-Cu silt anomaly from a stream draining Lower Paleozoic or earlier biotite schist and gneiss adjacent to the Cassiar Batholith. Prospecting located a Cretaceous granodiorite stock about 1600 m long containing stockwork quartz-molybdenite mineralization. Scattered mineralization was found over a length of 1200 m within a soil anomaly 4500 m by up to 800 m that closely follows the stock. Within the anomaly, Mo values exceed 9 ppm and are associated with scattered high Cu, W, F and Ag values. The best specimen assayed 0.03% Mo and 8 g/t Ag. Traces of chalcopyrite are also present.
