

Occurrence Details

Occurrence Number: 105B 115

Occurrence Name: Stoneaxe

Occurrence Type: Hard-rock

Status: Prospect

Date printed: 12/16/2025 7:37:36 AM

General Information

Secondary Commodities: tungsten, zinc

Deposit Type(s): Skarn W

Location(s): 60°43'59" N - -130°55'43" W

NTS Mapsheet(s): 105B10

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Stoneaxe cl (YA666180) in Jul/81 by SEREM L, which conducted geochem sampling and mapping later in the year. M. Holloway staked Don cl (YB10782) immediately west in Jan/88.

Capsule Geology

The claims cover two conformable, garnet-quartz-diopside skarns developed in schist and meta-grit of the Late Proterozoic-Early Cambrian Hyland Group. The skarns are located between the Gravel Lake monzonite to granodiorite stock to the east and a smaller satellite plug to the west.

The two skarns are named the East and West Zones. They vary from 0.2 to 7 m in thickness and have been traced along strike for 1200 and 600 m, respectively. Both contain scheelite with minor sphalerite. The best chip sample from the East Zone assayed 0.472% WO₃ and 0.10% Zn over 7 m, while chip samples from the weaker West Zone returned up to 0.125% WO₃ and 0.14% Zn over 0.75 m.
