

## Occurrence Details

**Occurrence Number:** 105D 062  
**Occurrence Name:** Lewes River  
**Occurrence Type:** Hard-rock  
**Status:** Prospect  
**Date printed:** 12/16/2025 3:19:29 PM

## General Information

**Secondary Commodities:** copper  
**Deposit Type(s):** Skarn Cu  
**Location(s):** 60°36'37" N - -134°53'11" W  
**NTS Mapsheet(s):** 105D10  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Staked as BC, etc cl (Y23039) in Jan/68 by Lewes River ML. Lewes River purchased the Cub cl (Y21064) (tied on to the east of the BC claims in Oct/67 by Pacific Giant Steel Ores L) and added Hulk, etc cl (Y24865) to the south and west in May/68 and explored with airborne mag, ground mag and IP surveys later in the year. Optioned in Sep/69 by Canex, which drilled 4 holes (486.2 m) and conducted additional mag and IP surveys later in the year and drilled a further 8 holes (990.0 m) in 1970. Lewes River changed its name to Olympian Int. Res L in 1973. The property was partially restaked in Jan/74 by Archer, Cathro & Assoc. L as Arca cl (Y78035). In 1975, Norwich Res L purchased the key claims from Olympian and briefly optioned the Arca group. In 2005, Arcturus restaked the Lewes River property claims and optioned a package of adjoining claims from M. Blusson in 2006. In 2008, Arcturus performed a ground magnetic geophysical survey which identified an anomaly greater than 1 km that is partially coincident with IP anomalies identified by previous work in the 1960s and 1970s. Later in 2008, Arcturus performed an IP survey over the property.

#### Capsule Geology

The claims were staked to cover the northeast contact of the Whitehorse Batholith in the overburden-covered Yukon River valley. Drilling two IP anomalies located a small, steeply dipping, northeast-plunging skarn deposit, which assayed 1.05% Cu over 39.6 m of core (about 30 m true thickness) in the best hole. Mineralization consists of chalcopyrite with minor bornite, molybdenite and chalcocite in garnet-diopside skarn. Interpretation of the results of the 2008 IP survey identified three zones of anomalous chargeability highs and one zone of resistivity highs. The new anomalies follow a northwesterly trend that is consistent with the interpreted trend of the batholith contact.

### Work History

Date	Work Type	Comment
12/31/2008	Ground Geophysics	Also IP survey.
12/31/1970	Drilling	Eight holes, 990 m.
12/31/1969	Drilling	Four holes, 486.2 m.
12/31/1969	Ground Geophysics	Also I.P. survey.
12/31/1968	Airborne Geophysics	

12/13/2008	Other	
12/13/1968	Ground Geophysics	Also IP survey.
