

Occurrence Details

Occurrence Number: 105D 065

Occurrence Name: Gronk

Occurrence Type: Hard-rock

Status: Showing

Date printed: 4/29/2025 7:12:30 AM

General Information

Secondary Commodities: copper

Deposit Type(s): Skarn Cu

Location(s): 60°39'29" N - -134°50'31" W

NTS Mapsheet(s): 105D10

Location Comments: .5 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Discovered in early 1900's. Staked as Gronk cl (Y18782) in Jun/67 and transferred to Lewes River ML in 1968 and explored by reconnaissance soil sampling, prospecting and an aeromag survey. Canex optioned the claims in Sep/69 and restaked them in Jul/70 as the Vic cl (Y52520). The east half of the property was soil sampled in 1971.

Capsule Geology

A garnet skarn containing minor chalcopyrite is exposed intermittently for over 914.4 m along the contact between Lewes River group limestone and a granodiorite stock. Old prospect pits are found in the area. A strong linear magnetic anomaly found about 1.6 km to the southeast was soil sampled but response was poor through the deep glacio-fluvial overburden.
