

Occurrence Details

Occurrence Number: 105D 176
Occurrence Name: Mt. Michie
Occurrence Type: Hard-rock
Status: Unknown
Date printed: 5/31/2025 7:58:37 AM

General Information

Deposit Type(s): Unknown
Location(s): 60°30'21" N - -134°5'58" W
NTS Mapsheet(s): 105D09
Location Comments: .5 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule

Work History

Staked as Lillian cl (YA95982) in Aug/86 by K. McCrory. Restaked as Dory cl (1-30) (YB46720) by R. Hamel in May/94. Hamel and others prospected and sampled the claims in May/95.

Capsule Geology

The claims overlie the contact between Lower Jurassic Laberge Group greywacke and Upper Triassic Lewes River Group greywacke and siltstone. Hamel staked the claims based on personal knowledge and the results of a government funded airborne geophysical survey. Several EM conductors were identified in the airborne geophysical survey, but ground traversing and prospecting failed to locate their source due to extensive overburden cover. Seventeen rock samples were collected on the traverses and all returned low to background values for gold and other elements.
