

Occurrence Details

Occurrence Number: 105E 015
Occurrence Name: Illusion
Occurrence Type: Hard-rock
Status: Showing
Date printed: 8/6/2025 1:46:26 AM

General Information

Secondary Commodities: chrysotile
Deposit Type(s): Ultramafic-hosted asbestos
Location(s): 61°38'56" N - -134°8'12" W
NTS Mapsheet(s): 105E09
Location Comments: .5 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule
Work History
Staked as Sam cl 1-8 (Y62024) in Aug/71 by Aquitaine Company of Canada Ltd, which carried out geological mapping and prospecting later in the year.
Capsule Geology
Simple crossfibre chrysotile occurs in a serpentinized peridotite sill 2100 m long and 300 m thick that dips about 25° east. The sill gives a 100 gamma aeromagnetic anomaly. Six showings are present in the south half of the sill and these have an average grade of from 1 to 2% fibre and an average length of about 0.5 cm.
