

Occurrence Details

Occurrence Number: 105F 012

Occurrence Name: Mm

Occurrence Type: Hard-rock

Status: Prospect

Date printed: 4/28/2025 11:06:16 AM

General Information

Secondary Commodities: barite, copper, gold, lead, silver, zinc

Aliases: Arnold

Deposit Type(s): Volcanogenic Massive Sulphide (VMS) Kuroko Cu-Pb-Zn

Location(s): 61°27'29" N - -132°38'32" W

NTS Mapsheet(s): 105F07

Location Comments: .5 Kilometres

Hand Samples Available: Yes

Last Reviewed:

Capsule

Work History

Staked as Zink cl 1-4 (Y54558) and 5-8 (Y54634) in Oct/70 by Spartan Exploration Ltd in a joint venture with Mitsui Mining & Smelting Company Ltd. Mitsui advanced \$50 00.00 towards exploration work on this and two other properties. No work appears to have been carried out on these claims and Mitsui converted its interest into 151 474 shares of Spartan in 1971. Restaked as MM cl 1-76 (Y73864) in Jul/73 by Anvil Mining Corporation Ltd which carried out geological mapping, prospecting, soil sampling and magnetic surveying before adding JJ cl 1-81 (Y74337) in Sep/73. The company then completed a gravity survey and drilled two holes (245.4 m) later in the year. In 1974 Anvil carried out soil sampling and magnetic surveying and drilled two holes (612.6 m). The property was transferred to Cyprus Anvil Mining Corporation Ltd in 1975, which entered a joint venture with Hudson's Bay Oil & Gas Ltd. In Aug/76 the companies staked DD cl 1-32 (YA625) to the north of the occurrence and drilled 7 holes (1 677.9 m) later in the year. They carried out soil sampling, magnetic and EM surveying and drilled 4 holes (1 642.3 m) in 1977 and carried out detailed geological mapping, prospecting, soil sampling and geophysical surveying in 1978. The property was transferred in 1985 to Curragh Resources Inc, which carried out trenching in 1987 and 1988. Anvil Range Mining Corporation acquired the property and other assets of Curragh Resources and drilled four holes (1 889 m) in 1996. In Apr/98 creditors of Anvil Range requested the appointment of an Interim Receiver and the company filed for bankruptcy. It was subsequently delisted from the TSE in Jan/99. Restaked as MM cl 1-12 (YB93603) in Feb/2002 by Eagle Plains Resources Ltd which carried out geological mapping, prospecting, soil and silt sampling and added MM cl 13-22 (YB94149) in Jul/2002.

Capsule Geology

The area is located southwest of the Tintina Fault on the Cassiar Platform. The Cassiar Platform is a curvilinear shelf that formed, between mid-Cambrian and Silurian time, roughly parallel to the western margin of the North American craton but separated from it by the Selwyn Basin. Shallow water deposition on the Cassiar Platform continued until Late Devonian time. Block faulting and local uplift during Late Devonian and Mississippian resulted in deposition of carbonaceous shale and chert pebble conglomerate in the Selwyn Basin and across the platform. Local explosive volcanism produced thick tuff and flows whose extremities intertongue with surrounding black shale. Some of these centres contain base metal mineralization. Calcareous argillite of Upper Paleozoic to Triassic age was deposited above the shale and volcanic sequence (Hunt, 1999).

The occurrence is located at the extreme southwest end of the Pelly Mountains volcanic belt, an arcuate belt approximately 80 km long and up to 25 km wide that forms part of the Cassiar Platform. The belt is comprised of localized volcanic centers separated by basins in-filled with sediments and volcaniclastic rocks. The present deformed thickness of the volcanic section is highly variable, ranging from less than 100 m to as much as 1 700 m. Associated with these volcanic rocks are at least two volcanogenic massive sulphide (VMS) deposits, the MM (this occurrence) and Wolf (Minfile Occurrence #105G 008) and numerous other historical showings including Chzernough (Minfile Occurrence #105F 071) and the Bnob (Minfile Occurrence #105F 073).

Zinc-lead-silver +/- copper mineralization occurs within a rusty-weathering volcanic-dominated sequence about 200 m thick that is over- and underlain by carbonaceous pelitic sediments. The mineralization is made up of several sulphide lenses along a roughly east-west trend that propagates from a central trachyte dome and associated volcanic breccia. The style of mineralization varies from east to west.

On the east side of the trend, mineralization consists of three separate mineralized lenses each about 100 m long and several tens of metres thick. Mineralogy of the massive sulphides includes massive to semi-massive pyrite with lesser sphalerite, galena, pyrrhotite and rare chalcopyrite and magnetite. The lenses are comprised of sulphide-silicate gneiss, quartzite, massive sulphide and barite. Smaller, increasingly baritic lenses are reported to extend for over 3 km to the east. Massive pyrite alternates with barite in the upper portion of the mineralized zone and forms the topmost unit in which sulphides are concentrated. The mineralization is hosted by a pyritic quartzite layer sandwiched between intermediate and felsic metavolcanic rocks. This volcanic sequence has been traced, through drilling to the southwest where it passes laterally into a trachyte dome flanked by volcanic breccia.

These mineralized horizons are thought to have at least in part an igneous protolith. Individual sulphide lenses display a wide variation in grade and metal ratio between diamond drill holes. Several drill holes intersected classic Kuroko style mineralization. Galena and sphalerite content increases towards the top of the lens, with an extensive chalcopyrite and quartz stringer zone underlying the lens.

On the west side of the trend mineralization occurs as narrow lenses in the middle and upper parts of the volcanic sequence. The largest lens in this area is about 2 m in thickness directly above the trachyte dome. West of the dome, mineralization consists of disseminated to laminated, semi-massive to massive pyrite to sphalerite-rich sulphides with lesser pyrrhotite, galena and chalcopyrite. Pyrite and pyrrhotite occur as disseminated grains, blebs, and veinlets. Relict mafic and feldspar minerals are consistent with an igneous protolith.

The majority of exploration data collected by Cyprus Anvil-Curragh-Anvil Range was never filed for assessment credit. The bankruptcy of Anvil Range and the resulting uncertainty of the Faro mine site have further delayed public release of the data. Based on Morin's work (1977), a few general results can be stated. The massive sulphide zone returned assays of up to 10% zinc, 0.4% copper, 4.2% lead and 41.1 g/t silver although average grades run approximately 5% zinc+lead. Assessment Report #060999 reports that at least some of the massive sulphide zones display coincident magnetic and gravity anomalies.

Eagle Plains Resources 2002 exploration program was preliminary in nature and was undertaken to verify the results of previous operators. The results verified the existence of volcanogenic massive sulphide mineralization. Rock samples collected in situ of massive pyrite-galena-chalcopyrite mineralization returned average values of up to > 10% zinc and 2% lead. Chalcopyrite rich mineralization returned values up to 2% copper. Elements such as arsenic, copper, silver, gold, cadmium and antimony returned sporadic anomalous values across the claims. Silt samples returned anomalous values for copper, lead, zinc, barite +/- gold. Soil samples returned strongly anomalous values for lead, zinc +/- copper and sporadic anomalous values for silver, arsenic and molybdenum.

ARMC015 671	MM samples and assay logs	Property File Collection	Drill Logs
ARMC015 669	MM/JJ claims - Vertical section C-D map - Figure 5	Property File Collection	Geoscience Map (General)
ARMC015 686	Horizontal loop EM survey notes - DD claim	Property File Collection	Miscellaneous Company Documents
ARMC015 696	Specific gravity determinations and sketch maps - 1974 MM drill core and magnetometer survey	Property File Collection	Geoscience Map (General)
ARMC015 692	Sketch map - CEM shootback survey - DD claims	Property File Collection	Geoscience Map (General)
ARMC015 688	Sketch map - DD claims grid	Property File Collection	Geoscience Map (General)
ARMC015 687	Sketch map - DD claims grid - Showing area of anomalous geochem	Property File Collection	Geoscience Map (General)
ARMC015 690	Sketch map - DD group - HEM survey	Property File Collection	Geoscience Map (General)
ARMC015 691	Sketch map - Magnetometer survey - DD claims	Property File Collection	Geoscience Map (General)
ARMC015 683	Sketch map - MM claims - with showings and drill hole	Property File Collection	Geoscience Map (General)
ARMC015 674	Sketch map of MM drill hole locations and notes	Property File Collection	Miscellaneous Company Documents
ARMC015 699	Sketch map of MM trench	Property File Collection	Geoscience Map (General)
ARMC015	Sketch map of Section through MM 07 trench with notes	Property File	Geoscience Map (General)

	Sketch map of section through MM or vertical with notes	Collection	Geoscience Map (General)
704			
ARMC015 685	Sketch map showing drill holes and sample numbers near Seagull Creek - DD claims	Property File Collection	Geoscience Map (General)
ARMC015 676	Sketch map showing geology, structure, DDH holes and geochem - MM project	Property File Collection	Geoscience Map (General)
ARMC015 660	Sketch of survey - MM/JJ claims - Anvil Range	Property File Collection	Geoscience Map (General)
ARMC014 920	Letter and notes re: Core samples for analysis - MM claim	Property File Collection	Miscellaneous Company Documents
ARMC014 926	Figures 2-17 to accompany MM project summary report	Property File Collection	Miscellaneous Company Documents
ARMC014 233	Claims map drawn on NTS sheet 105F - Quiet Lake	Property File Collection	Geoscience Map (General)
ARMC015 700	Compilation of notes on MM claims	Property File Collection	Miscellaneous Company Documents
ARMC015 694	Geochem report - DD claim - Report numbers: R-8043, R-8050, R-7022, R-7023	Property File Collection	Report
ARMC015 695	Coordinates of DDH and WHI - MM claim project - File no. 967-74	Property File Collection	Miscellaneous Company Documents
ARMC015 646	Anvil - MM project - Roll No. NW 110973 - Air photo flight maps	Property File Collection	Geoscience Map (General)
ARMC020 390	Geology map - 105F/07 - Hand drawn markings - Pelly Mountain area	Property File Collection	Geoscience Map (General)
ARMC020 179	Assay Log - DDH 96MM-01	Property File Collection	Drill Logs
ARMC020 180	Diamond drill core log - DDH 96MM-01	Property File Collection	Drill Logs
ARMC020 181	Structural log - DDH 96MM-01	Property File Collection	Drill Logs
ARMC020 182	Geotechnical log - DDH 96MM-01	Property File Collection	Drill Logs
ARMC020 183	Lithologic log - DDH MM96-01-01	Property File Collection	Drill Logs
ARMC020 184	Alteration log - DDH MM96-01-01	Property File Collection	Drill Logs
ARMC020 185	Fault log - DDH 96MM-01	Property File Collection	Drill Logs
ARMC020 189	Diamond drill core log - DDH 96MM-02	Property File Collection	Drill Logs
ARMC020 190	Assay log - DDH 96MM-02	Property File Collection	Drill Logs
ARMC020 191	Lithologic log - DDH 96MM-02	Property File Collection	Drill Logs
ARMC020 192	Fault log - DDH 96MM-02	Property File Collection	Drill Logs
ARMC020 193	Geotechnical log - DDH 96MM02	Property File Collection	Drill Logs
ARMC020 194	Structural log - DDH 96MM-02	Property File Collection	Drill Logs
ARMC020 195	Alteration log - DDH 96MM-02	Property File Collection	Drill Logs
ARMC020 196	Diamond drill core log - DDH 96MM-03	Property File Collection	Drill Logs
ARMC020 197	Lithologic log - DDH 96MM-03	Property File Collection	Drill Logs
ARMC020 198	Structural log - DDH 96MM-03	Property File Collection	Drill Logs
ARMC020 199	Alteration log - DDH 96MM-03	Property File Collection	Drill Logs
ARMC020 200	Geotechnical log - DDH MM-03	Property File Collection	Drill Logs
ARMC020 201	Camp location map - MM/JJ claims	Property File Collection	Geoscience Map (General)
ARMC020 202	Vertical section A-B - MM/JJ claims - Figure 4	Property File Collection	Geoscience Map (General)
ARMC020 203	Geology of drilling area - MM/JJ claims - Figure 3	Property File Collection	Geoscience Map (Geological - Bedrock)

ARMC020 204	Soil geochemistry - Pb - MM/JJ claims - Figure 2	Property File Collection	Geochemical Map
ARMC020 205	Property geology - MM/JJ claims - Figure 1	Property File Collection	Geoscience Map (Geological - Bedrock)
ARMC020 206	Alteration log - DDH 96MM-04	Property File Collection	Drill Logs
ARMC014 921	Geochemical lab report - MM claim - Report no. V88-10210.0	Property File Collection	Miscellaneous Company Documents
ARMC018 276	Assay book - 1976 - Dy, MM, MacMillan, Pelly, Swim Lake	Property File Collection	Assays
ARMC018 277	Assay book - 1977 - Dy, Pelly, MM	Property File Collection	Assays
ARMC014 922	Assay logs, fault logs - MM claim - DDH 96 MM-01	Property File Collection	Drill Logs
ARMC015 663	Fault map of MM claims	Property File Collection	Geoscience Map (Geological - Bedrock)
ARMC017 499	Sample assay sheets - Random grab samples - MM claims	Property File Collection	Assays
ARMC017 502	Soil sample sheets - MM project	Property File Collection	Miscellaneous Company Documents
ARMC015 705	Assays results - MM claim	Property File Collection	Assays
ARMC015 655	Daily status report - Diamond drilling - MM/JJ claims	Property File Collection	Drill Logs
ARMC015 682	Field notes - MM geology - Structure and colored geology	Property File Collection	Miscellaneous Company Documents
ARMC015 703	Field notes, sketch map of barite horizon in trench - MM claims	Property File Collection	Miscellaneous Company Documents
ARMC015 680	Certificate of assay , assay values, assay notes, and grab sample assay - MM claims	Property File Collection	Assays
ARMC014 925	Diamond drill core logs - MM claim - 96 MM-01 to 04	Property File Collection	Drill Logs
ARMC017 925	Field book - MM-76 drillholes - MM claim	Property File Collection	Drill Logs
ARMC014 924	Set of MM claim diamond drill records 1973 - 1977	Property File Collection	Drill Logs
ARMC014 928	Geological report on the MM claim group - Watson Lake mining district - Yukon Territory - Field work done during the period July 2 to 20, 1978	Property File Collection	Report
ARMC014 313	Pelly project summary report: 1978 - Watson Lake mining district, Yukon Territory - Field work done during the period: June 12 - August 30, 1978	Property File Collection	Report
ARMC015 654	Profile A-A' map with notations - MM/JJ property	Property File Collection	Geoscience Map (General)
ARMC014 919	Diamond drill record - MM claim - Hole No. 73 MM 01	Property File Collection	Drill Logs
ARMC014 918	Diamond drill record - MM claim - Hole No. 76 MM 01 to 06	Property File Collection	Drill Logs
ARMC014 917	Diamond drill record - MM claim - Hole No. 77 MM 02	Property File Collection	Drill Logs
ARMC015 679	Geochemical laboratory reports No. 79-A, No. 93-A, and No. 84-A - MM claims - Project MM-460	Property File Collection	Assays
ARMC020 207	Sketch of survey July 31, Aug 01, 1996 - MM/JJ claims - Anvil Range	Property File Collection	Geoscience Map (General)
ARMC020 208	MM summary logs - DDH 73MM through 77MM	Property File Collection	Drill Logs
ARMC017 513	Soil sample geochemical results analyses - Quiet, Glenlyon, MM, Seagull, and Tummel	Property File Collection	Miscellaneous Company Documents
ARMC017 514	Arithmetic averages for Tummel-Pelly Basin and Seagull Creek	Property File Collection	Miscellaneous Company Documents
