

Occurrence Details

Occurrence Number: 105F 045

Occurrence Name: Danger

Occurrence Type: Hard-rock

Status: Showing

Date printed: 6/15/2025 11:47:29 AM

General Information

Deposit Type(s): Vein Au-Quartz

Location(s): 61°54'51" N - -132°39'0" W

NTS Mapsheet(s): 105F15

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Discovered by the GSC in 1944 and staked in Jul/74 as Lee cl (Y79350) by M. Zeiler. Restaked as Eel cl (YA4634) in Jun/76 by Welcome North ML, which performed mapping and geochem sampling in 1976 and 1977. St Joseph EL tied on Bob cl (YA22769) to the north in Mar/78 and explored with geochem sampling and mapping later in the year.

Capsule Geology

The original showing found by the GSC consists of minor amounts of malachite and chalcopyrite with small, green micaceous crystals in occasional quartz veins which cut Cambro-Ordovician shale and carbonate. Welcome North found minor amounts of galena and sphalerite in Road River Formation shale of Ordovician to Lower Devonian age.
