

Occurrence Details

Occurrence Number: 105F 051

Occurrence Name: Joe

Occurrence Type: Hard-rock

Status: Unknown

Date printed: 12/17/2025 12:51:34 AM

General Information

Deposit Type(s): Unknown

Location(s): 61°44'21" N - -132°5'44" W

NTS Mapsheet(s): 105F09

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Joe cl (89852) in Jan/66 by A. Kopinec and W. Green, who explored with bulldozer trenching later in the year. The south side was restaked as part of a large block of Kepi cl (YB11118) in Jan/88 by Welcome North ML, which explored with airborne mag and EM surveys, prospecting, mapping and geochem sampling later in the year.

Capsule Geology

Magnetic and resistivity data suggest that the claims are probably underlain by Late Tertiary rhyolite and basalt along the Tintina Fault Zone, which is bounded by Paleozoic metasedimentary rocks.
