

Occurrence Details

Occurrence Number: 105F 053

Occurrence Name: Key

Occurrence Type: Hard-rock

Status: Deposit

Date printed: 4/30/2025 2:25:54 AM

General Information

Secondary Commodities: copper, lead, silver

Aliases: Key 3, Silver Ridge

Deposit Type(s): Vein Polymetallic Ag-Pb-Zn+/-Au

Location(s): 61°34'24" N - -132°12'51" W

NTS Mapsheet(s): 105F09

Location Comments: .5 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

The Silver Ridge showing was discovered in Aug/54 by G. Fairclough and E. Erickson, who staked it as the Key 3 cl (69103) in August and optioned it until 1957 to Conwest, which drove three 3 short adits (about 23.5m total) and hand trenched in 1955.

The property was optioned in 1958 by R.R. Kirwan, H. Regehr & E. Erickson who drove a 10.7 m adit and drilled 7 x-ray holes (64m) in 1959, and built a 56 km road, shipped 13.2 tonnes of cobbled ore to the Trail Smelter and transferred the claims to a new company, Ketzakey Silver ML in 1960.

Following a legal dispute, the property was optioned from 1964 to 1972 by Silver Key ML, which performed only limited bulldozer trenching.

Restaked as B cl (Y64472) in Jul/72 by Regehr, Erickson & A.M. Riba, who hand cobbled about 46.7 tonnes from the old adits, formed a new company, Iona Silver ML, in 1976 to develop the property, and explored with bulldozer trenching in 1977 and 1979.

In Aug/79, Argorex Gesellschaft zur Gewinnung von Bodenschätzen GmbH & Co obtained first right of refusal for production financing through an Iona option to TRV MLs Corp, which retained a 5% net smelter interest.

G. Karens tied on Toots cl (YA50431) to the northwest in Mar/80 and explored with hand trenching later the year. Iona optioned its claims to Canamax Res Inc in 1985 and changed its name to Aigner Holdings L in 1981. J. Seward restaked Toots cl as Tea (YA99460) in Oct/86 and hand trenched in 1987.

In Mar/95 R. Berdahl staked D cl 1-2 (YB59266) on the west boundary of the B claims. In Aug/95 Berdahl staked Dad cl 1-13 (YB60965) on the southern boundary of the D claims. One month later Berdahl added Dad cl 14-17 to his claim holdings. In Oct/95 Atna Resources staked Dad cl 18-21 (YB70832).

The occurrence was restaked as B cl 1-10 (YB85402) by R. Berdahl in Jul/96. Berdahl staked D cl 3-4 (YB85400) at the same time.

Capsule Geology

The adits were driven on cross-veinlets that join a main vein striking about 010o and dipping 38o west. The showing consists of a fairly massive lens of galena with minor sphalerite, tetrahedrite, chalcopyrite and jamesonite about 7.3 m long, which averaged 1028.5 g/t Ag and 18% Pb across an average width of 0.9 m. Discontinuous mineralization was traced for a length of 82 m in siderite gangue.

The vein cuts a sequence of argillite, slate and cherty quartzite at the base of a Mississippian felsic volcanic unit. Selected galena specimens reportedly assayed as high as 17 142.4 g/t Ag but most assays contained much less silver. Woodcock reported that No. 2 adit assayed 1110.83 g/t Ag and 17.8% Pb across a 3 m width for a length of 7.4 m and that two bulk samples from No. 1 adit gave an arithmetic average of 1114.3 g/t Ag, 4.8% Pb and 0.35% Cu.

Sampling by A.E. Aho in 1963 indicated that four zones are present that assay from 685.7 to 1817 g/t Ag, and 6.4 to 23% Pb across widths of 0.7 to 1.0 m for lengths of 4.6 to 9.1 m. At least 3 other weaker showings occur within 610 m to the east and southeast.

Work History

Date	Work Type	Comment
12/31/1977	Trenching	
12/31/1976	Trenching	Hand cobbled 41.86 tonnes from the old adits.
12/31/1964	Trenching	

12/31/1960	Development, Surface	Built a 56.3 km road.
12/31/1960	Trenching	Hand cobbled 11.83 tonnes.
12/31/1959	Drilling	Number of holes drilled: 7 Amount of work done: 64 METRES
12/31/1959	Other	Drove a 10.67 m adit.
12/31/1955	Trenching	
12/31/1955	Other	Drove three short adits (about 23.47 m in total).
