

Occurrence Details

Occurrence Number: 105F 088

Occurrence Name: Growth

Occurrence Type: Hard-rock

Status: Showing

Date printed: 12/17/2025 12:11:22 AM

General Information

Secondary Commodities: barite

Deposit Type(s): Volcanogenic Massive Sulphide (VMS) Kuroko Cu-Pb-Zn

Location(s): 61°56'5" N - -132°56'42" W

NTS Mapsheet(s): 105F15

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Grew cl (YA18310) in Jun/77 by Amax, which explored with mapping, geochem and EM surveys in 1977 and 1978, conducted more mapping and geochem sampling in 1982 in a joint venture with Procan Can L, and transferred its interest to Canamax Res Inc in 1983.

Capsule Geology

Minor sphalerite and galena occur in veins and as disseminations within chert-agglomerate-carbonate sequence of Mississippian age. The showing lies on the west side of a dacite, rhyolite, tuff and breccia assemblage containing 2 to 10% pyrrhotite that is intruded by two small biotite quartz monzonite plutons. Massive bedded barite beds are interbedded with limestone.
