

## Occurrence Details

**Occurrence Number:** 105G 109  
**Occurrence Name:** Copland  
**Occurrence Type:** Hard-rock  
**Status:** Unknown  
**Date printed:** 12/17/2025 6:55:23 PM

## General Information

**Deposit Type(s):** Unknown  
**Location(s):** 61°31'36" N - -130°57'49" W  
**NTS Mapsheet(s):** 105G10  
**Location Comments:** 1 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Staked as Mink cl (YB14560) in Aug/88 by Noranda. Expatriate Resources Ltd staked League cl 1-20 (YB59143) 12 km to the southeast in Mar/95. Between July and Oct/95 Expatriate added League cl 21-322 (YB60204) to their claim holdings.  
In Oct/95 F. Charlie Sr. and sons staked Imp cl 1-18 (YB69761) north of the League claims.

#### Capsule Geology

The Finlayson Lake region is dominantly underlain by a layered sequence of Devonian to Early Mississippian metavolcanic and metasedimentary rocks of the Yukon-Tanana Terrane (YTT) that have been intruded by Mississippian granitic intrusions and later Jurassic, Cretaceous and Eocene intrusions (Murphy et al., 2001). The YTT is a volcanic-plutonic pericratonic arc assemblage that was strongly deformed and metamorphosed by Late Triassic time. Volcanic-hosted massive sulphide deposits exist at different stratigraphic positions within the YTT. The claims cover the contact between quartz-carbonate and serpentinized ultramafic rocks and a Jurassic diorite sill of the North Lakes meta-diorite unit.
