Work History

Staked as Reno cl (Y27585) to the west in Jun/68 by Nebco OL and Vagas cl (Y41885) in Dec/69 by Weland Mg L (later Weland Cons. Mg L). Nebco carried out soil sampling and mapping in 1969-70 and Weland conducted soil sampling and a magnetometer survey in 1971. Restaked as CEE cl (YA50307) in Feb/80 by R. Wondga, and as Vagas cl (YA58039) in Apr/81 by Vancilffe Res L, which optioned the claims to Kinai Res. Vancilffe also added On cl (YA57396) to the west in Feb/81, which were trenched by Zlato Res Corp later in the year.

Capsule Geology

The claims are underlain by biotite schist and phyllite near an intrusive contact. Overburden cover is extensive and no mineralization has been found, although Nebco outlined four weak lead anomalies.
