

Occurrence Details

Occurrence Number: 105J 038

Occurrence Name: Flood

Occurrence Type: Hard-rock

Status: Anomaly

Date printed: 4/29/2025 2:14:54 AM

General Information

Secondary Commodities: gold, silver

Deposit Type(s): Epithermal Au-Ag: Low Sulphidation

Location(s): 62°26'31" N - -131°55'0" W

NTS Mapsheet(s): 105J05

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Rags cl (YA75053) in Sep/82 by Agip Can L, which performed limited mapping and geochem sampling in 1983.

Capsule Geology

Fault zones cutting dacite and volcanic breccia contain zeolite- calcite-quartz-gypsum veining and associated bleaching and hematization. Host rocks have been assigned to the mid-Cretaceous South Fork volcanics.

Exploration was directed toward precious metals but samples returned only trace amounts of gold and silver.
