

Occurrence Details

Occurrence Number: 105K 068

Occurrence Name: Reserve

Occurrence Type: Hard-rock

Status: Prospect

Date printed: 4/28/2025 9:47:17 AM

General Information

Secondary Commodities: copper

Deposit Type(s): Skarn Cu

Location(s): 62°27'12" N - -133°51'0" W

NTS Mapsheet(s): 105K05

Location Comments: 1 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Mark cl 1-77 and Lee cl 1-8 (Y53864) in Jul/70 by Anvil Syndicate (Canadian Reserve Oil and Gas Ltd, Occidental Minerals Ltd, Aquitaine Company of Canada Ltd, Canadian Southern Petroleum Ltd and Husky Oil Ltd), which carried out magnetometer, EM and gravity surveying and drilled one hole (91 m) in 1971, and additional mapping, geochemical and IP surveying in 1972. Partially restaked to the east as Gran, etc cl (Y58253), starting in Aug/70, by Cima Resources Ltd and Cyprus Anvil Mining Corporation (formerly Dynasty Explorations Ltd), which carried out magnetometer and EM surveying in 1970-73 and later continued this program in a joint venture with Preussag Canada Ltd. Turam and gravity surveying were carried out in 1976-77 and one hole (152 m) was drilled on Gran cl 15 in 1977.

The Bev cl 1-28 (Y92491) were tied on to the south in Feb/75 by Vangorda Project (Welcome North Mines Ltd and Getty Mines Ltd), which carried out geological mapping and geochemical, magnetometer and EM surveying later in the year. Part of the Mark group to the west was restaked as 32 Lodo, etc cl (Y98430) in May/75 by Lobell Mines Ltd.

Restaked as Al cl 1-16 (YA97494) in Jun/87 by B. Kelhert and Selmane Resource Corporation, who also staked Lar cl 1-16 (YA97478) 2 km west at the same time. Contact Bay Resources carried out geological mapping and geochemical surveying on the Lar group in 1987 and reinterpreted the 1970-71 gravity profiles using two-dimensional computer modelling.

The Al and Lar claims were fringe staked as Darcy cl 1-38 (YB26638) in Aug/89 by Eagle Lake Resources Ltd.

Capsule Geology

The property covers a number of gravity anomalies on the south flank of the mid-Cretaceous Anvil Batholith, 16 km northwest of the Faro lead-zinc-silver mine. The area is covered by overburden. It is interpreted to be underlain by schists of the Lower Cambrian Mount Mye formation which are intruded by mid-Cretaceous Anvil Batholith granite. The 1971 drill hole was stopped in overburden. The 1977 drill hole was collared in granite of the Anvil Batholith.

Work History

Date	Work Type	Comment
12/31/1987	Geology	
12/31/1987	Geochemistry	
12/31/1977	Drilling	One hole, 152 m on the Gran 15 claim.

12/31/1976	Ground Geophysics	Also Turam survey.
12/31/1975	Geology	
12/31/1975	Geochemistry	Also silt sampling.
12/31/1975	Ground Geophysics	Also magnetic survey.
12/31/1972	Geology	
12/31/1972	Geochemistry	
12/31/1972	Ground Geophysics	Also magnetic survey.
12/31/1971	Drilling	One hole, 91 m.
12/31/1971	Ground Geophysics	Also magnetic and gravity surveys.
12/31/1970	Ground Geophysics	Also magnetic survey.
