

## Occurrence Details

**Occurrence Number:** 105L 060

**Occurrence Name:** Marble

**Occurrence Type:** Hard-rock

**Status:** Anomaly

**Date printed:** 12/20/2025 5:20:57 AM

## General Information

**Secondary Commodities:** gold

**Deposit Type(s):** Unknown

**Location(s):** 62°7'55" N - -134°58'57" W

**NTS Mapsheet(s):** 105L02

**Location Comments:** .5 Kilometres

**Hand Samples Available:** No

**Last Reviewed:**

### Capsule

#### Work History

Staked as two blocks of Marble cl (YB26455) 0.5 km apart in Jul/89 by Comaplex Minerals Ltd, which performed prospecting and soil geochemistry in 1990. The claims were transferred to A. Carlos in Jun/91.

#### Capsule Geology

Tertiary rhyolite and dacite and andesite tuffs, flows and dykes overlie Triassic andesitic and basaltic rocks and interbedded limestone. Comaplex located two broad areas of quartz-sericite altered rhyolite. In one of these areas, the rhyolite is cut by spherulitic, flow-banded rhyolite and narrow gas-breccia dykes. Rock samples contained up to 73 ppb Au.
