

## Occurrence Details

**Occurrence Number:** 1050 027  
**Occurrence Name:** Gary  
**Occurrence Type:** Hard-rock  
**Status:** Deposit  
**Date printed:** 12/15/2025 1:06:42 PM

## General Information

**Primary Commodities:** barite  
**Aliases:** Gargantua  
**Deposit Type(s):** Sediment hosted Stratiform Barite  
**Location(s):** 63°6'5" N - -130°11'37" W  
**NTS Mapsheet(s):** 105001  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Staked as Gary cl 1-38 (Y84402) in Aug/74 by Ogilvie Joint Venture (C.L. Smith, Brinco Ltd, Mitsubishi Metal Corporation Ltd and Ventures West Capital Ltd), which carried out geochemical sampling in 1974 and geological mapping, grid geochemical soil sampling and gravity surveying in 1975.  
In 1977 the joint venture carried out geological mapping, geochemical soil sampling and Maxmin EM surveying, before the Smith and Ventures West interests were assigned to Ogilvie Mineral Corporation Ltd and part of the Brinco interest was assigned to A.M. and S. Canada Ltd (Conzinc Riotinto of Australia).

#### Capsule Geology

Bedded barite is exposed in two showings (Gargantua and South Gargantua) that range from 3 to 18 m in thickness. The barite is light grey, finely interlaminated with argillite at the base of the Devonian to Mississippian Earn Group, and contains no visible sulphides. The estimated exposed reserves are 2 721 554 million tonnes of barite that is 70 to 80% pure, with 20 to 30% Fe<sub>2</sub>O<sub>3</sub> and SiO<sub>2</sub>.

### Resource/Reserve

Year	Zone	Type	Commodity	Grade	Tonnage	Amount	Reported Amount	43-101 Compliant	Cut-off
1976	GARY (OPEN PIT)	Historical Estimate	barite	70 %	2,721,554		No	No	Unknown

Tonnage is reported in Mineral Industry Report 1976, p. 116. Rowe (Assessment Report #061658) reports that the barite is 70- 80% pure, with 20-30% Fe2O3 and SiO2. Grade = minimum purity. Resource appears to be educated guess.
