

## Occurrence Details

**Occurrence Number:** 106D 047  
**Occurrence Name:** Gray  
**Occurrence Type:** Hard-rock  
**Status:** Showing  
**Date printed:** 4/29/2025 4:17:15 PM

## General Information

**Secondary Commodities:** copper  
**Deposit Type(s):** Vein Cu+/-Ag Quartz  
**Location(s):** 64°45'4" N - 134°15'5" W  
**NTS Mapsheet(s):** 106D16  
**Location Comments:** 1 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Reported by the Geological Survey of Canada and staked as Par cl 1-8 (Y14723) in May/68 by New Jersey Zinc Exploration Company (Canada) Ltd, which prospected later in the year.

#### Capsule Geology

The occurrence is located at the headwaters of an unnamed creek located on the southwest branch of the Bear River, approximately 7 km south of the Bear River airstrip. The area was regionally mapped by L. Green (1972) of the Geological Survey of Canada in 1961 as part of a helicopter-supported party known as Operation Ogilvie. D. Thorkelson (2000) a geologist with the Canada/Yukon Geoscience Office (now part of the Yukon Geological Survey), remapped topographic map sheet 106D/16 in the 1990's as part of a larger bulletin on the Wernecke Mountains. Gordey and Makepeace of the Geological Survey of Canada, released an updated geological compilation of the Yukon in 2003. During the course of field work relating to mass-wasting effects in selected areas of the Ogilvie and Wernecke Mountains, J.T. Gray of the Geological Survey of Canada noted chalcopryrite, azurite and malachite mineralization on joint surfaces at a number of locations within a 3.2 kilometer square area centered over the occurrence area. According to Thorkelson the area is underlain by argillite of the Lower Proterozoic Quartet Group, and orange dolomite of the Lower Proterozoic Gillespie Lake Group. Both units are members of the larger Wernecke Supergroup. No exploration results can be found related to the prospecting program carried out by New Jersey Zinc.
