

Occurrence Details

Occurrence Number: 115B 012 Occurrence Name: Kul Occurrence Type: Hard-rock Status: Prospect Date printed: 8/1/2025 11:22:15 AM

General Information

Secondary Commodities: copper, gypsum Aliases: Ultra, Outpost Deposit Type(s): Ultramafic Mafic Gabbroid Cu-Ni-PGE Location(s): 60°56'18" N - -138°21'34" W NTS Mapsheet(s): 115B16 Location Comments: .5 Kilometres Hand Samples Available: No Last Reviewed:

Capsule

Work History

Staked as KUL cl (YA79000) in Dec/83 by Noranda, which performed mapping and geochem sampling in 1984. Restaked as the UZ claims by T. Morgan in 2011 and optioned to Ashburton Ventures Inc. in 2013. Ashburton dropped the option in 2014. In 2016, Group Ten Minerals Inc optioned the property.

In 2017, 2018, 2019 and 2020 Group Ten performed geological mapping, prospecting and sampling on the property.

Capsule Geology

The claims cover a contact between Devonian or younger limestone and clastic rocks and a Cretaceous pluton. A gypsum body is tectonically emplaced along a regional thrust fault that follows the south edge of the property.

The Kul occurrence is characterized as skarn and vein occurrences associated with Kluane Range granitic intrusive and Late Triassic metasedimentary rocks. Mineralization generally consists of pyritechalcopyrite veinlets and lenses in quartz-carbonate veining and skarn bands.
