

## Occurrence Details

**Occurrence Number:** 115G 019  
**Occurrence Name:** Jaquot  
**Occurrence Type:** Hard-rock  
**Status:** Prospect  
**Date printed:** 12/16/2025 3:19:29 PM

## General Information

**Secondary Commodities:** copper, gold, silver  
**Deposit Type(s):** Ultramafic Mafic Gabbroid Cu-Ni-PGE  
**Location(s):** 61°24'33" N - -139°19'4" W  
**NTS Mapsheet(s):** 115G06  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Discovered between 1904 and 1914 by the Jacquot Brothers, who explored by hand trenching. Restaked as Kluane cl (4466) in Nov/44 by L. Jacquot, as Kluane cl (60733) in May/52 by Yukon Mg CL, and as Teddy & Mary cl (92626) in Aug/65 by Alice Lake ML. Newmont staked the Go cl (Y10833) on the south side in Nov/66 following release of GSC aeromagnetic maps and prospected and sampled the claims in 1967. Alice Lake conducted trenching in 1966, EM surveys in 1968 and 1969, and drilled 6 holes (309.4 m) in 1968 and 7 holes (314.6 m) in 1970. Restaked as Bornite cl (Y80246) in Aug/74 and Roda cl (YA3647) in Sep/75 by O. Rothbauer.

#### Capsule Geology

Numerous minor showings of bornite with minor chalcopyrite and chalcocite occur in amygdaloidal metabasalt of the Upper Triassic Nikolai Greenstone. A sample by the GSC in 1914 assayed 33.1% Cu and trace Au and Ag across 45 cm. A sample across 40 cm by Morrison, visually estimated at 30% Cu, assayed trace Au and 329.1 g/t Ag. Only a trace of malachite and native copper was found in the 1970 drilling.

### Work History

Date	Work Type	Comment
12/31/1970	Drilling	Seven holes, 314.6 m.
12/31/1969	Ground Geophysics	
12/31/1968	Drilling	Six holes, 309.4 m.
12/31/1968	Ground Geophysics	
12/31/1966	Trenching	
12/31/1914	Trenching	Carried out between 1904 and 1914.
