

Occurrence Details

Occurrence Number: 115G 085

Occurrence Name: Maple

Occurrence Type: Hard-rock

Status: Showing

Date printed: 8/6/2025 12:42:40 AM

General Information

Secondary Commodities: gypsum

Deposit Type(s): Sediment hosted Bedded Gypsum

Location(s): 61°25'6" N - -139°33'55" W

NTS Mapsheet(s): 115G05

Location Comments: .5 Kilometres

Hand Samples Available: Yes

Last Reviewed:

Capsule

Work History

Gypsum was reported from this location by the GSC in 1967. An area 3 km to the west was staked as Mac & Colt cl (YA97427) in Jun/87 by R. Empey, and fringe staked to the north with Don cl (YB8574) in Oct/87 by R. Quesnel. In Jun/88, the Don claims were transferred to Avanti Mls L and then Gold City Res Inc, which prospected and sampled later that year.

Capsule Geology

Gypsum occurs along a thrust faulted contact between a Cretaceous diorite intrusion and Upper Triassic Nikolai Greenstone.
