

Occurrence Details

Occurrence Number: 115G 094

Occurrence Name: Linda

Occurrence Type: Hard-rock

Status: Prospect

Date printed: 6/14/2025 4:53:48 PM

General Information

Secondary Commodities: cobalt, copper, gold, iridium, nickel, osmium, palladium, platinum, rhodium, ruthenium

Deposit Type(s): Ultramafic Mafic Alaskan-type Pt+/-Os+/-Rh+/-Ir

Location(s): 61°27'17" N - -139°26'41" W

NTS Mapsheet(s): 115G06

Location Comments: .5 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Jeep cl 233-252 (64827) in Sep/52 by Yukon Mining Company Ltd and optioned to Hudson Bay Mining & Smelting Ltd, which carried out prospecting and mapping through a new company, Hudson-Yukon Mines Ltd. Restaked as Linda cl 1-10 (93010) in Oct/65 by P. and H. Verslucce, who prospected and sampled in 1966 and formed a new company, Quill Creek Copper Mines Ltd, to develop the property. Quill Creek optioned the property to Newmont, which performed mapping and sampling in 1967-68. Optioned in 1972 by the Nickel Syndicate (Canadian Superior Exploration Ltd, Aquitaine, Home Oil Ltd and Getty Mines Ltd), which carried out geological mapping and sampling later in the year. Restaked as Klu cl 1-71 (YA94404) between Apr/86 and Sep/87 by Kluane Joint Venture (All-North Resources Ltd and Chevron Minerals Ltd), which carried out limited soil sampling and prospecting later in the year. The property was optioned by Rockridge Mining Corp and 2001 Resource Industries Ltd, (Linda Joint Venture), which carried out geological mapping, geochemical sampling, bulldozer trenching, road construction and magnetic and EM surveying in 1987 and 1988 and drilled 3 holes (246 m) in 1988. A. McBride tied on Dial cl (YA98078) to the south in Jul/88 and performed sampling later in the year and in 1989. In 1997 Northern Platinum Ltd optioned the Klu claims (known as the Linda property), as a part of a larger option agreement covering the neighboring Wellgreen deposit (Minfile Occurrence #115G 024). Using a crew based at the Wellgreen camp, the company, re-built access roads, drilled 3 reverse circulation holes (60.4m) and re-sampled all known showings located on the claims.

Capsule Geology

Pyrrhotite, pyrite, chalcopyrite and pentlandite occur as disseminations, fracture fillings and massive lenses in and along the margins of Late Triassic peridotite sills that include gabbro or clinopyroxenite phases of the Quill Creek ultramafic complex. Strong nickel-copper-PGE soil anomalies are found along the 2500 m length of the sill and at least six showings have been discovered. The best showings are associated with the gabbro phases. A specimen from the upper showing on lower Linda Creek returned 4.20% Ni, 0.68% Cu, 0.08% Co, 0.03 g/t Au, 0.93 g/t Pt, 4.39 g/t Pd, 1.06 g/t Ir, 2.71 g/t Os, 3.29 g/t Ru and 0.31 g/t Rh and a 1988 drill hole intersected 1.2 m grading 3.51% Ni, 1.66% Cu, 2.74 g/t Pt, 7.13 g/t Pd, 0.99 g/t Ir, 0.65 g/t Os, 0.89 g/t Ru and 0.51 g/t Rh. At the Mex Showing, 1500 m to the east, a chip sample from a bulldozer trench assayed 0.52% Ni, 0.54% Cu, 1.40 g/t Pt and 1.60 g/t Pd across 6 m. Specimens taken by McBride from Triassic Nikolai greenstone volcanic rocks on the Dial claims assayed up to 9.42% Cu and 0.41% g/t Au. Northern Platinum used their exploration program to acquaint themselves with the claims. All known showings were examined and sampled. Assay results generally agreed with previous work. All 3 reverse circulation holes encountered problems during drilling and did not return expected results. A bulldozer was used to rebuild access roads around the claim block and to clear drill pads and trenches for future exploration work.
