Occurrence Details

Occurrence Number: 115H 049
Occurrence Name: Mt. Bark
Occurrence Type: Hard-rock
Status: Anomaly
Date printed: 5/31/2025 2:52:45 AM

General Information

Deposit Type(s): Vein Au-Quartz
Location(s): 61°5'57" N - -137°35'58" W
NTS Mapsheet(s): 115H04
Location Comments: 1 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule

Work History

This is the southernmost of four separate blocks of Ruby cl (YA95693) staked in Aug/86 by United Keno Hill ML. United Keno Hill performed mapping and soil sampling in 1989. Restaked by J.P. Ross as Joy cl (YB27811) in Aug/90.

Capsule Geology

The claims were staked to cover gold silt anomalies following a government regional geochemical survey and are underlain by cordierite-biotite schist of probable Paleozoic age. A zone of anomalous float containing up to 150 ppb Au coincides with a topographic lineament which is the trace of a north-striking thrust fault. The anomalous float consists of scorodite-stained breccia formed of smoky quartz fragments in a hematite-limonite matrix.
