

## Occurrence Details

**Occurrence Number:** 115I 019

**Occurrence Name:** Bradens Canyon

**Occurrence Type:** Hard-rock

**Status:** Prospect

**Date printed:** 12/16/2025 7:35:20 AM

## General Information

**Secondary Commodities:** copper, silver

**Deposit Type(s):** Vein Cu+/-Ag Quartz

**Location(s):** 62°50'4" N - -136°51'23" W

**NTS Mapsheet(s):** 115I15

**Location Comments:** .5 Kilometres

**Hand Samples Available:** No

**Last Reviewed:**

### Capsule

#### Work History

Found in the early 1900's and examined by British Yukon EL in the late 1950's. Staked as Cee cl (87908) in early 1963 by S. McCowan and optioned to Glenlyon ML in 1969. Restaked as Zonk cl (Y66076) in Mar/72, by South Yukon JV (Union OC of Can L; Standard OC of B.C. L; Marietta Res Int L; Straus E Inc), which explored by reconnaissance soil sampling and prospecting later in the year.

R. Berdahl staked VMS cl 1-4 (YB67162) 3 km to the south in Jul/96.

#### Capsule Geology

A 1.2 m wide lens of hornblende gneiss in Paleozoic? schist is mineralized with chalcopyrite. The schistosity trends east and dips about 74° south. A chip sample across 1.2 m assayed 0.5% Cu and 2.1 g/t Ag. Boulder float (up to 3 m by 2.4 m by 1.2 m) of hornblende gneiss mineralized with bornite is found immediately downhill from the showing along the river bank. Chip samples of the boulders assayed between 1.3% and 3.6% copper with minor gold, silver and molybdenum values.
