

## Occurrence Details

**Occurrence Number:** 115I 026  
**Occurrence Name:** Pelly  
**Occurrence Type:** Hard-rock  
**Status:** Prospect  
**Date printed:** 6/16/2025 1:09:35 AM

## General Information

**Secondary Commodities:** copper, molybdenum  
**Deposit Type(s):** Porphyry Cu-Mo-Au  
**Location(s):** 62°48'28" N - -137°17'38" W  
**NTS Mapsheet(s):** 115I14  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

Work History

Staked as Pelly cl (Y57546) in Aug/70 by Can Occidental Pet L, which explored by grid soil sampling, geological mapping and mag and IP surveys in 1971, drilled 3 holes (430.0 m) in 1972 and added the Prat cl (Y66664) in May/72. The claims partially overstaked the Palisades Nature Retreat.  
Restaked as Dad cl (YA59258) in Feb/81 by United Keno Hill ML, which performed mapping and geochemical sampling later in the year.

Capsule Geology

The claims were staked to cover copper and molybdenum geochemical anomalies near the contact between foliated granodiorite, and Paleozoic? argillite, tuff and graphitic schist, and Triassic mafic volcanic rocks. Sparsely distributed pyrite, chalcopyrite and traces of chalcocite were found in the western part of the granodiorite.  
The 1972 drilling tested geochemical and IP targets, intersecting graphitic argillite and tuff with up to 20% pyrite but only minor values in Cu (104 ppm) and Mo (74 ppm).
