

Occurrence Details

Occurrence Number: 115I 077

Occurrence Name: Crossing

Occurrence Type: Hard-rock

Status: Showing

Date printed: 6/15/2025 9:11:42 AM

General Information

Secondary Commodities: copper

Deposit Type(s): Vein Cu+/-Ag Quartz

Location(s): 62°20'14" N - -136°29'8" W

NTS Mapsheet(s): 115I08

Location Comments: .5 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

An old 3 m adit occurs here but no staking records have been found. It is possible that three copper grants, Red Cliff, Gold Bug and Ground Squirrel, recorded at Fort Selkirk in September, 1899 by S.H. Lough and J.H. Jorgenson, were situated here although no locations were given other than an identification as Mineral Location No. 5. Staked as Fac cl (Y66839) in Jul/72 by P. Versluis and optioned in Oct/73 by B.A. Copper ML, which carried out several days prospecting and reconnaissance soil sampling in 1974.

Capsule Geology

Minor copper oxide with traces of chalcopyrite are found for a length of 15 m along a bluff of Mt Nansen volcanics which outcrop on the west side of the Yukon Crossing tote trail. Average grade is visually estimated at less than 0.5% Cu although selected specimens from the talus could grade up to 2% Cu.
