

Occurrence Details

Occurrence Number: 1151 097 Occurrence Name: Boylen Occurrence Type: Hard-rock Status: Anomaly Date printed: 4/28/2025 4:34:30 PM

General Information

Deposit Type(s): Unknown Location(s): 62°38'7" N - -137°11'33" W NTS Mapsheet(s): 115111 Location Comments: .5 Kilometres Hand Samples Available: No Last Reviewed:

Capsule

Work History

Staked as Sun cl (Y62700) in Sep/71 by T. Boylen, etc and optioned in Aug/73 by United Keno Exploration (a joint venture between United Keno Hill ML, Falconbridge Nickel ML and Can. Superior EL), which conducted grid soil sampling in 1973 and magnetic, IP and EM surveys and 213.4 m of drilling (one hole) in 1974 before dropping the option.

Capsule Geology

The claims are underlain by weakly foliated hornblende granodiorite cut by aplite and pegmatite dykes. The foliation strikes northwest and dips almost vertically. The hole tested an IP anomaly but did not intersect any mineralization.
