Work History

Staked as Vic cl (92956) in Oct/65 by L. Proctor, who soon abandoned them and restaked the ground as part of a large block of Ray cl (97882) in Jan/66. These were transferred to Nordex EL, which explored the area with regional geochem. Restaked as 112 Vic cl (Y3800I) in Sep/69 by Great Horn Mg Syndicate Inc, which conducted grid soil sampling and prospecting in 1970.

Capsule Geology

The area is generally underlain by Klotassin Batholith granodiorite. Several streams are moderately anomalous in copper but no source was located. Soil sampling located a weak copper anomaly on the Vic 2 and 4 claims.
