

Occurrence Details

Occurrence Number: 1150 056
Occurrence Name: Fothergill
Occurrence Type: Hard-rock
Status: Anomaly
Date printed: 12/18/2025 4:54:21 AM

General Information

Secondary Commodities: gold
Aliases: Conglomerate
Deposit Type(s): Paleoplacer
Location(s): 63°38'54" N - -139°6'54" W
NTS Mapsheet(s): 115011
Location Comments: .5 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule

Work History

Staked as Eclipse, etc claims about 1900 by C. Fothergill, who explored with 2 shafts (9 and 15 m) and extensive hand trenching prior to 1912. Restaked as Hay cl (YA64807) in Nov/81 by Eldorado Nuclear L, which performed geochemical and radiometric surveys in 1982, and as IR cl (YB17466) in Aug/88 by Imperial Met Corp. Restaked as Yuk's Rand 1-6 (YB48036) by T. Morgan in Dec/93. In 1994 Morgan performed 8 days of drifting on property. V. Matkovich staked Home cl 1-4 (YC03713) 5 km to the southeast in Feb/97 and Way cl 1-6 (YC05318) 1.5 km to the east in Oct/97.

Capsule Geology

This property is similar in all respects to the McKinnon showing (Minfile 1150 054), 5.6 km to the northwest. Sampling by MacLean showed that the Eocene conglomerate contains only trace amounts of gold.
