

Occurrence Details

Occurrence Number: 115P 036
Occurrence Name: Bander
Occurrence Type: Hard-rock
Status: Showing
Date printed: 6/15/2025 11:45:09 AM

General Information

Secondary Commodities: lead
Deposit Type(s): Vein and Greisens Sn
Location(s): 63°47'14" N - -136°50'13" W
NTS Mapsheet(s): 115P15
Location Comments: 1 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule

Work History

Staked as Bander & Snatch cl (YA40328) in Jul/79 by the Cortin Project (CCH Res L, Inco and Billiton E Can L), which explored with geochem sampling and mapping in 1979-81. CCH changed its name to Campbell Res Inc in 1980.

Capsule Geology

The claims were staked on reconnaissance stream sediment tin anomalies in an area underlain by Late Proterozoic-Early Cambrian Hyland Group metasedimentary rocks including argillite, limestone, phyllite and quartz-feldspar crystal tuff. The metamorphic rocks are intruded by Cretaceous feldspar porphyry and biotite lamprophyre dykes and quartz diorite to granite porphyry stocks. Soil sampling on the claims returned moderately anomalous values in silver, arsenic and zinc although tin values are uniformly low. The only mineralization found consists of accessory amounts of galena and arsenopyrite that occur locally in quartz-carbonate veins.
