

Occurrence Details

Occurrence Number: 116A 008
Occurrence Name: Grace
Occurrence Type: Hard-rock
Status: Anomaly
Date printed: 12/16/2025 3:21:04 PM

General Information

Secondary Commodities: copper, gold, lead, silver, zinc
Deposit Type(s): Manto Polymetallic Ag-Pb-Zn
Location(s): 64°39'8" N - -136°47'25" W
NTS Mapsheet(s): 116A10
Location Comments: .5 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule

Work History

Staked as Hart cl 1-22 (Y27466) in Jun/68 by Montana ML which staked additional Hart cl 51-63 (Y32612) in Jul/69 about 3.2 km to the northeast. Explored by prospecting and stream sediment sampling in 1969. The Grace cl (Y27071) were staked immediately to the east in Jun/68 by Iskut Silver ML.

Capsule Geology

The claims are underlain by Lower Proterozoic sedimentary rocks of the Gillespie Lake and Quartet Groups which are cut by Middle Proterozoic mafic sills. Copper, zinc and lead stream sediment anomalies were outlined in the southeast and northern portions of the main claim group. Argillite float containing disseminated pyrite with minor chalcopyrite was found, and one specimen rich in galena gave an assay of 59.7% Pb, 157.7 g/t Ag, 0.07% Cu, and trace Zn and Au.
