

Occurrence Details

Occurrence Number: 116A 010
Occurrence Name: Belcarra
Occurrence Type: Hard-rock
Status: Showing
Date printed: 12/15/2025 1:06:50 PM

General Information

Secondary Commodities: copper, lead, zinc
Deposit Type(s): Manto Polymetallic Ag-Pb-Zn
Location(s): 64°39'46" N - -136°52'48" W
NTS Mapsheet(s): 116A10
Location Comments: .5 Kilometres
Hand Samples Available: No
Last Reviewed:

Capsule

Work History

Staked as the Rose and John cl (Y26967) and a separate block of June cl (Y27433) was staked about 3.2 km to the east in Jun/68 by Cream Silver ML, which explored by grid geochem, EM and mag surveys and trenching later in the year. In 1969, Cream planned to explore the adjacent Can, Ry and Ter cl (Y26501), staked in Jun/68 by Belcarra EL, and a new joint venture company, Belmoral ML, was formed. After negotiations broke down, Cream purchased the claims from Belcarra in May/70 and conducted grid soil sampling, geophysical surveys, geological mapping and minor trenching in 1972. Restaked as part of a large block of Luke cl (YA37588) in Aug/78 by Welcome North ML. Restaked by Inco L as part of a block of 40 Arm cl (YB29400) in Nov/92.

Capsule Geology

The claims cover Lower Proterozoic, sedimentary sequences belonging to the Gillespie Lake and Quartet Groups. A few small occurrences of chalcopyrite, galena and sphalerite occur in hornfelsed siltstone and shale of the Quartet Group and de-dolomitized white marble of the Gillespie Lake Group located along the southern margin of a mafic intrusion mapped on the Rose claim group. Trenching indicated that mineralization is erratic over a width of 1.8 m and a length of 250 m. The 1972 program is reported to have detected nothing of interest.

Work History

Date	Work Type	Comment
12/31/1970	Geology	
12/31/1970	Geochemistry	
12/31/1970	Ground Geophysics	
12/31/1970	Trenching	
12/31/1969	Geochemistry	
12/31/1969	Ground Geophysics	Also magnetic survey.
12/31/1969	Trenching	
12/13/1972	Geology	
12/13/1972	Geochemistry
