

## Occurrence Details

**Occurrence Number:** 116A 036  
**Occurrence Name:** Holcapek  
**Occurrence Type:** Hard-rock  
**Status:** Prospect  
**Date printed:** 4/29/2025 5:43:15 PM

## General Information

**Deposit Type(s):** Vein Polymetallic Ag-Pb-Zn+/-Au  
**Location(s):** 64°40'31" N - -136°54'28" W  
**NTS Mapsheet(s):** 116A10  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Staked as the Rose and John cl (Y26967) by Cream Silver ML, which explored by grid geochem, EM, and mag surveys and trenching later in the year. In 1969, Cream planned to explore the adjacent Can, Ry and Ter cl (Y26501), staked in Jun/68 by Belcarra EL, and a new joint venture company, Belmoral ML, was formed. After negotiations broke down, Cream purchased the claims from Belcarra in May/70 and conducted grid soil sampling, geophysical surveys, geological mapping and minor trenching in 1972. Restaked as part of a large block of Luke cl (YA37588) in Aug/78 by Welcome North ML. Restaked by Inco L as part of a block of 40 Arm cl (YB29400) in Nov/92.

#### Capsule Geology

The claims cover Lower Proterozoic, Gillespie Lake and Quartet Groups. The prospect was formerly part of minfile occurrence #116A 010. Cream Silver reported float containing chalcopyrite, galena and sphalerite. Abbott (1997) examined the prospect and reported the following. A hand trench about 10 m long in talus of Gillespie dolostone exposes a few pieces of chalcopyrite-bearing white bull quartz, up to 20 cm across. About 100 m to the northeast across a northwest trending normal fault, similar malachite stained vein quartz occurs in talus of black shale of the Quartet Group.
