

## Occurrence Details

**Occurrence Number:** 116B 087

**Occurrence Name:** Kiwi

**Occurrence Type:** Hard-rock

**Status:** Prospect

**Date printed:** 10/3/2025 8:48:51 PM

## General Information

**Secondary Commodities:** copper, lead, silver, zinc

**Deposit Type(s):** Sediment hosted Mississippi Valley-Type Pb-Zn (MVT)

**Location(s):** 64°44'15" N - -138°47'42" W

**NTS Mapsheet(s):** 116B10

**Location Comments:** 1 Kilometres

**Hand Samples Available:** Yes

**Last Reviewed:**

### Capsule

#### Work History

Staked as Kiwi cl (Y82919) in Jul/74 by Dynasty EL, which explored by contour soil sampling and mapping in 1974. The claims were transferred to Cyprus Anvil Mg Corp in 1975 and explored by grid soil sampling, hand trenching and mapping. In 1981, Cyprus Anvil became a subsidiary of Dome Pet L. In 1984, Dome optioned the property to Dawson Eldorado Gold EL, which conducted more sampling and added Seela cl (YA84500) in Aug/84. In 1985, Dome's interest was sold to Curragh Res L while Dawson Eldorado changed its name to Dawson Eldorado ML and performed additional sampling. In Apr/86, Dawson Eldorado added more Seela cl (YA87911) and in June the entire property was optioned to Canadian United Mls Inc, which performed mapping, geochem sampling, bulldozer trenching and 2 diamond drill holes (212 m) later that year. The Kiwi cl were transferred to Avanti Minerals Ltd in Jul/93.

#### Capsule Geology

Seven showings occur in fractured Proterozoic dolomite over a 1 000 m strike length. The main showing consists of strongly oxidized sphalerite and galena within an east-trending fault breccia zone 8 m wide. A channel sample from a trench assayed 19.8% Zn, 16.3% Pb, 116 g/t Ag and 0.05% Cu across 10.6 m. Four of the seven zones were trenching in 1986 and of these, three are in northwest-trending fracture zones and one in a southwest-trending breccia body. The 1986 drilling tested the main showing. Hole I intersected two mineralized zones. The upper zone assayed 13.8% Zn over a true width of 3.5 m, while the lower zone returned 3.4% Zn over 4.8 m. Hole 2 returned comparable results from the upper zone but did not cut the lower zone. Neither zone contained significant lead or silver values.
