

## Occurrence Details

**Occurrence Number:** 116B 110  
**Occurrence Name:** Rayner  
**Occurrence Type:** Hard-rock  
**Status:** Anomaly  
**Date printed:** 6/15/2025 11:45:25 AM

## General Information

**Secondary Commodities:** zinc  
**Aliases:** Brx  
**Deposit Type(s):** Sediment hosted Mississippi Valley-Type Pb-Zn (MVT)  
**Location(s):** 64°43'52" N - -139°8'48" W  
**NTS Mapsheet(s):** 116B11  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Staked as BRX cl 1-8 (YA9537) in Sep/76, following airborne radiometric prospecting, by Prism Syndicate (Prism Resources Limited, Canex Placer Limited, The Granby Mining Company Limited & Chieftain Development Company Limited) which performed mapping and a test EM survey in 1977.  
In Jun/96, High Sense Geophysics Ltd. under contract to Equity Engineering Limited flew a regional, helicopter borne, magnetic and radiometric survey over most of the Coal Creek Inlier, but no new claims were staked.

#### Capsule Geology

The area is underlain by Proterozoic Gillespie Lake, Pinguicula/Fifteen Mile, and Callison sedimentary rocks (Gordey and Makepeace, 2000). Mineralized float occurs in a valley and consists of quartz, pyrite and honey coloured sphalerite in fractures cutting dolomite breccia, and massive pyrite in quartz. The dolomite unit is overlain by a thick shale section. The regional airborne geophysical survey outlined numerous northeast trending features which were interpreted to be faults.
