

## Occurrence Details

**Occurrence Number:** 116C 026  
**Occurrence Name:** Acheron  
**Occurrence Type:** Hard-rock  
**Status:** Prospect  
**Date printed:** 4/29/2025 7:38:27 PM

## General Information

**Secondary Commodities:** asbestos  
**Aliases:** Emu  
**Deposit Type(s):** Ultramafic-hosted asbestos  
**Location(s):** 64°25'52" N - -140°38'8" W  
**NTS Mapsheet(s):** 116C07  
**Location Comments:** .5 Kilometres  
**Hand Samples Available:** No  
**Last Reviewed:**

### Capsule

#### Work History

Staked as Emu cl (79116) in Aug/62 following an aeromag survey by a joint venture between Asbestos Corp and Yukon Cons Gold Corp, which restaked in Sep/63 as RG cl (79405) and explored with a ground magnetic survey and mapping and minor trenching in 1964. The claims were transferred to D. Reinke in 1967 and optioned in 1968 to Acheron ML, which performed a ground mag survey and explored in a joint venture with Falcon EL by bulldozer trenching in 1971 and 3 drill holes (277.4 m) and more bulldozer trenching in 1972. The Clin Chin cl (87530) were tied on in Jul/66 by Sphere Dev Corp L, which flew an aeromag survey in 1967. Acheron changed its name to Pan Acheron Res L in 1976 and to Acheron Res L in 1982 and conducted more bulldozer trenching in 1976.

#### Capsule Geology

Chrysotile fibre occurs in a zone up to 305 m long and 12 m wide within a large serpentine body 1 220 by 610 m that is enclosed in argillite of the Nasina Series. The best hole returned a 10.7 m section grading 1.7% fibre with maximum length of 6 mm (hole 3). The average maximum length is about 10 mm.

### Work History

Date	Work Type	Comment
12/31/1976	Trenching	
12/31/1972	Trenching	
12/31/1971	Drilling	Three holes, 277 m.
12/31/1971	Trenching	
12/31/1968	Ground Geophysics	
12/31/1964	Geology	
12/31/1964	Ground Geophysics	
12/31/1964	Trenching	

### Assessment Reports that overlap occurrence

Report Number	Year	Title	Worktypes	Holes Drilled	Meters Drilled
