

Occurrence Details

Occurrence Number: 116C 120

Occurrence Name: Judy

Occurrence Type: Hard-rock

Status: Showing

Date printed: 4/29/2025 7:38:27 PM

General Information

Secondary Commodities: asbestos

Deposit Type(s): Ultramafic-hosted asbestos

Location(s): 64°26'32" N - -140°37'33" W

NTS Mapsheet(s): 116C07

Location Comments: .5 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

Staked as Judy cl (76505) in Jun/64 by Cassiar Asbestos Corp L, which explored with bulldozer trenching in 1964, mapping and a magnetic survey in 1966 and bulldozer trenching in 1970.

Capsule Geology

Chrysotile fibre up to 6 mm long occurs in a serpentinized ultramafic body within an area about 600 m long by 300 m wide. The ultramafic body occurs in graphitic schist of the Nasina Series and is mostly covered by thin overburden. Trenching near the southwest contact exposed very low grade to barren serpentinite. Quartz-carbonate alteration is common on the east side.
