

## Occurrence Details

**Occurrence Number:** 116C 141

**Occurrence Name:** Cripple

**Occurrence Type:** Hard-rock

**Status:** Anomaly

**Date printed:** 12/16/2025 5:05:58 PM

## General Information

**Secondary Commodities:** asbestos

**Aliases:** Carol, Joe, Rosa, Tater

**Deposit Type(s):** Ultramafic-hosted asbestos

**Location(s):** 64°26'42" N - -140°40'51" W

**NTS Mapsheet(s):** 116C07

**Location Comments:** .5 Kilometres

**Hand Samples Available:** No

**Last Reviewed:**

### Capsule

#### Work History

Staked as Cripple, Carol, etc cl (79295) in 1959 by Cassiar Asbestos Corp, which explored with a mag survey and a shallow bulldozer trench on the eastern side. Restaked as Tater cl (YA55738) in Jul/81 by Teslin JV (Brinco Mg L, Cominco & Exploram), which performed mapping and sampling in 1981 and 1982.

#### Capsule Geology

The claims were staked to cover an exposure of ultramafic talus on the northeast side of Clinton Creek, about 2 km southeast of Snowshoe Pit. The ultramafic rock consists of highly sheared serpentinite with occasional chrysotile veins up to 5 mm wide in some talus fragments. It is enclosed by schist of the Nasina Series and is covered by alluvial terrace gravels above the 549 m (1800 ft) elevation.
