#### Work History

Staked as Toad cl (Y82687) in Jun/74 by Brascan Res L, which conducted mapping, soil sampling and hand trenching later in the year.

#### Capsule Geology

Sphalerite and galena occur along fractures and in veins, and less commonly as vug fillings in Cambrian to Devonian platform carbonate rocks that are folded and faulted in a north or northwesterly direction. The mineralized section has a stratigraphic thickness of 7.6 m and has been followed for a strike length of 41 m. Chip samples from two 3 m trenches assayed up to 3% Pb, 12% Zn and 1.0 g/t Ag.
