

Occurrence Details

Occurrence Number: 117A 031

Occurrence Name: Shingle

Occurrence Type: Hard-rock

Status: Anomaly

Date printed: 12/16/2025 5:57:41 PM

General Information

Secondary Commodities: coal

Deposit Type(s): Coal

Location(s): 68°53'8" N - -138°1'40" W

NTS Mapsheet(s): 117A14

Location Comments: .5 Kilometres

Hand Samples Available: No

Last Reviewed:

Capsule

Work History

First noted by the GSC in 1972 and apparently never staked or investigated. This target lies within a large area withdrawn from staking in Jun/78 pending creation of a National Wilderness Park, settlement of native land claims, and development of a management plan for the Porcupine Caribou Herd.

Capsule Geology

A 2-m seam of poor quality, high volatile bituminous coal is interbedded with sand, gravel and mud belonging to the Aklak Member of the Paleocene Reindeer Formation. The coal is exposed on the west flank of Deep Creek syncline.

Work History

Date	Work Type	Comment
12/13/1972	Other	Noted by Geological Survey of Canada in 1972.
