

Occurrence Details

Occurrence Number: 105B 167
Occurrence Name: PL
Occurrence Type: Hard-rock
Status: Showing
Date printed: 6/15/2025 11:44:11 AM

General Information

Primary Commodities: lead, silver, zinc
Deposit Type(s): Unknown
Location(s): N - W
NTS Mapsheet(s): 105B01
Location Comments: Satellite image location of 1986 trenches
Hand Samples Available: No
Last Reviewed:

Capsule

Exploration History

Regional Resources Ltd staked the PL cl 1-70 (YA71144) in June/84 and conducted road work, soil and rock sampling. In 1986 they occurrence was trenched. The claims were later allowed to lapse.
In Oct/96 G. Lee restaked the occurrence as the cl 1-48 (YB87360). R. Stack added Wildcat 51-58 (YB91858) to the block at the same time. The partners carried out magnetic and EM surveying in 1998 and 1999.
In 2009, Kildeer Minerals Inc. optioned the Wildcat property from G. Lee and performed five holes (902 m) of diamond drilling on the main Wildcat occurrence.

Capsule Geology

The occurrence is situated within the Cassiar terrane which constitutes the northern part of the Omineca Belt of the Canadian Cordillera. It is underlain by Lower Paleozoic carbonates and siliciclastic sediments which are bound by the intrusive rocks of the Cassiar Batholith to the west. The area is cut by some steep tectonic zones and minor intrusive bodies. Trenching on the showing in 1986 returned 1.82% zinc, 25 g/t silver over 4 m and exposed numerous manganese oxide stained rocks.
